Specially designed lower bar clamp provides the option of 8 different back and forth positions in 5 mm increments. (Maximum)

One piece stabilizer is set by 4 special bolts. To securely mount handlebar, the clamp is designed to be tightened first with the 2 front side bolts, then the 2 rear side bolts.

Reinforcing ribs are positioned for maximized strength and minimized weight.

The one-piece upper bar clamp helps stabilize handlebar and prevents bar twist when falling down.

The two holes allow 2 back and forth positions of the handlebar clamp on the top clamp. Utilizing the optional lower clamp enables different handlebar height positions.

Front fork clamp area designed to securely clamp the front fork. Specially designed Front fork bolts are made of stainless to prevent corrosion.

WP REAR SUSPENSION GAS VALVE

- WP made rear shock sub tank gas sealed valve conversion adapter (Schrader type).
- Allows Nitrogen gas fitting through a iniversal schrader valve without WP special tools.
- By adding the prevent-falling design, the reliability is improved.
- Lineup of two types: Dent and Flat.

CHAIN GUIDE

- Chain guide composed of TPU, excellent in wear resistance and restorability and duralumin plate with CNC processing.
- Reduce the load on the swing arm attachment stay by using TPU material that is durable against impact and wear.
- 3D design slider reduces the impact of the debris coming from all directions.
- Maintains its guiding performance that requires rigidity by a duralumin plate designed exclusively for the model.

- * Please apply removable low to medium strength screw lock for installation.
- * Please check the slider wear periodically.
- * In the case of trail models, guiding performance is enhanced as much as racers. The abrasion speed varies depending on the number. (Maximum number of 45)

Replacement Chain Guide Block

ZE82-1900 *Replacement. The slider covers all line-up model.

3D DESIGN

Angles in the front avoid the impact, and the sleek 3D design reduces the catching and damage risk.

ELASTIC MATERIAL

Its Elastic structure avoids interference trouble with sprocket, compared to one made of aluminum when catching the debris.

SLIM NUT

The insert nut is used on the back. Eliminating the protruding bolts and nuts, smooth head shape reduces catch during tire change.

SLIDER BOTTOM

The slider bottom has a reduced contact area in consideration to the ground clearance.

KTM, Husqvarna. Change the slider without removing the chain.

FORGED ALUMINUM KICK STAND

- Lines up with 25 mm shorter than the stock.
(Some models have high lift standards.)
- Avoids an unstable bike even during changing of the bike height. Can also be used safely on rough roads by selecting the OPTION TIP.
- A2014 aluminum is used, maintains strength and durability.

* The inclination varies depending on the model. If the length of the TIP does not work well, see the OPTION TIP conversion table below and change the TIP.

AR1 WHEEL KIT

Z-WHEEL

AR1 WHEEL KIT TRAIL

- A wheel kit assembled with the same specifications as the AR1 WHEEL for dual sports models.
- By combining Z-Wheel made R50 aluminum rim, ASTELIGHT HUB, and an Aluminum nipple spoke set, compared with stock, a light weight and high strength wheel is achieved.

[Astelight HUB]

By precision CNC machining, high-strength cylindrical aluminum to 1/10th in weight, the design emphasizes strength, light weight and a beautiful appearance.

[R50Rim]

R50 rim is racing specification for MX / ED race use. The rim uses A7050 T6 Aluminum to pursue a cross-sectional surface designed to balance contradictory conditions of strength versus weight.

[Aluminum Nipple & Stainless Spoke]

High strength aluminum nipples that provides weight reduction compared to stock steel nipples. High strength stainless steel spoke set which provides a balance of strength and reduced weight by increasing the wire diameter.

AR1 WHEEL KIT XR250/MOTARD, XR400R, CRM250R/AR

- The XR series stock wheel has low lateral rigidity because the spokes are assembled differently from the MX racing models.
- The AR1 wheel kit not only increases the lateral rigidity by feeding back the motocrosser hub design, but also compared with the genuine hub, a weight reduction of about 700g is achieved.
- The wire diameter is increased both at the front and rear to increase strength.
- The rear wheel increases the number of spokes from 32 to 36 so that power can be delivered to the ground without any waste.

Kit contents: rim / hub / Stainless spoke set / aluminum nipple set.
(These parts are not compatible with stock except bearings and seals.)

"Racing Complete Wheel Kit" designed for Supermotard

AR1 WHEEL KIT

ASTELIGHT HUB, which is ultra high precision cut aluminum, achieves a light weight product compared with genuine parts. All internal parts such as bearings are press-fitted.

"M50 rim" specially designed for Supermotard made of A7000 series material with excellent strength balance.

Z-WHEEL aluminum nipples and stainless steel spokes are used. The front 16.5-inch wheel uses cross-spoke to minimize calliper / spoke interference.

Z-WHEEL

AR1 MOTARD WHEEL KIT FRONT / REAR JP

- Complete wheel kit combining M50 rim designed for motard and ASTELIGHT hub.
- The front wheel of the competition bike is set to 16.5 inches and 17 inches, and this is the best kit for the conversion of a motocrosser into a supermotard.

Kit contents : rim / hub / stainless steel spoke set / aluminum nipple set (assembled for 1 wheel)

[Please note] Installation requires modification.

Example: Routing of brake hose front fork guard / chain guide / swing arm, etc.

DRASTIC WEIGHT REDUCTION

- ASTELIGHT HUB achieves thorough weight reduction through CNC process while keeping necessary and sufficient strength.
- The middle portion is boldly cut inside as shown in image (A), and has CNC process done even in areas not visible. Since a large force is not stressed to the portion of the oil seal in image (B), by reducing the thickness, it contributes to weight reduction.
- The accumulation detailed efforts achieves 2/3 weight compared to other brands.

DISTANCE COLLAR

- The material uses A7075 T6 aluminum to ensure sufficient strength. Even non-visible portion reduces the weight by the thinning of the distance collar except at the ends.

HUB DESIGN

- The front hub is "concave design" that draws a gentle curved shape on the center body.
- Even with the thin designed, the curve absorbs impact from outside.
- By having shaved the inside and smoothed the outside shape, there is no waste in performance.

COMPATIBILITY WITH STOCK BEARING AND OIL SEAL

- To have compatibility with the stock parts, easy maintenance is not only the target. But to use the same size as the manufacturer importantly focuses on balance.

ASTELIGHT HUB CRF1000L

- By precision CNC machining high-strength cylindrical aluminum to 1/10th in weight, the design emphasizes strength, light weight and a beautiful appearance.
- Thinning structure on the side of the hub to keep mud out from the hub body.
- Compared to the OEM castings, weight reduction of about 500 g is achieved for front and rear set.
- Designed to be able to use in the stock condition of the normal rim and spoke.

ZIGRAM ROTOR

- Standard sized brake rotor developed for use under extreme conditions with off road riding.
- Thick design for improved strength.
- Made of high carbon stainless steel (SUS420) for better brake feel and corrosion resistance.
- Standard type is a light weight design with holes placed based on strength analysis.
- Mud type has a solid design to keep the mud away from the rotor and prevent frictional wear of brake pads in a muddy race.

BRAKE HOSE

- PTFE inner brake hose covered by stainless mesh provides better stopping power and sensitive control.
- PVC red and blue color brake hose cover protects stainless mesh from rock and mud.
- Chrome plate coated brake banjo. Nut fitting design provides flexible brake hose installation.

TYPE-602 LED FLASHER

MOTO LED flashers may not work properly without optional parts.

DRC MOTO LED INDICATOR WIRING

This kit is required when flasher operates like hazard indicators after the IC relay installation. Place these harnesses in-between the wires from the pilot lamp and the wires from the chassis.

* Some models (*3) require this kit for proper operation.

*3 ----- XR230, KSR110, KLX250, D-TRACKER-'07 etc.

Part number [D45-91-051](#)

DRC MOTO LED RESISTOR WIRE

When standard bulb flasher is replaced by LED flasher, electric consumption becomes low and stock flasher relay does not work correctly. This Resistor wire helps stabilize the electric power to the LED flasher from stock flasher relay.

: Electric power consumption level is the same as with stock flasher.

: Easy installation.

: One resistor per flasher.

* Some models (*2) require 2 resistors.

: This harness will produce heat when used. Please install in areas where heat is not a problem.

*2 ----- XR230, DR250R, DRZ400S/SM etc.

Part number [D45-90-710](#)

DRC MOTO LED IC RELAY for DC

Stock flasher relay is designed to work with standard bulb flashers. When the stock flasher is changed to LED flashers, the stock flasher relay does not work properly due to the difference in power consumption between the stock flasher bulb and the LED flasher. This IC Relay enables LED flashers to work in any configuration.

* Some models require the use of the stock IC relay along with this IC relay. (*1)

: Reduced electrical power usage.

: Some technical skills required for installation.

: One IC relay required for each bike.

: Flasher pilot light can not be used with position light when installed on XR250.

: If the flasher operates like hazard indicators after installation, Indicator lamp wiring kit is required.

: Works on 12V DC.

Can not be used with WR250F/450F

*1----- RMX250S, DRZ400S/SM etc.

Part number [D45-69-830](#)

Installation of the LED flashers requires special knowledge and technique.

Please contact your local dealer if you have any question upon installation.

Important note for using LED flasher

LED flashers have very low consumption and the stock flasher relay may not work properly. The most frequent problem, is that the LED may flash at a quick rate using stock flasher relays. Please refer to the chart below to choose our IC relay or Resistor wire for your installation.

	Electric consumption	Difficulty of installation	Parts cost	AC or DC
IC Relay	Low	Skills required	Cheap	DC
Resistor wire kit	Same as stock	Easy	Reasonable	DC/AC

* DRC IC Relay can not be used with motorcycles (XR50/100M, XLR250, WR250F/WR450F, XR650 etc) due to the AC power design.
Please use Resistor wire kit for AC power motorcycle.

EASY INSTALLATION, ALL IN ONE ELECTRIC KIT!!

DRC MOTO LED EZ ELECTRIC WIRE KIT

- Easy to install electrical parts (excluding headlight, tail light and flashers) for competition bikes.
- Easy installation. No experience necessary.
- Power source for this kit is completely self-contained (uses 8 AA batteries).

DRC SPROCKET BOLT / NUT SET

- Sprocket mounting hardware.
- Kit includes 6, 8 mm tapered bolts, 6 washers and 6 locking nuts.
- Can be used for most dirt bikes.

Part number **D58-32-282** Bolt size M8 x 25 mm

DRC
REAR SUSPENSION LINK KIT
LOWDOWN / HIGH LIFT

- Kit to lift up or lowdown the bike.
- Allows to optimal bike position for a rider by changing seat height, link ratio, caster angle.
- The lowdown type : The amount of descent is designed to maximize the performance without losing the off road function.
- The high lift type : Allows improved nimble steering and better traction as the wheelbase becomes shorter with a steep caster.
- Easy installation with two bolts.
- Black color.

[Important note]
As the link ratio changes, the lowdown type makes the suspension softer, and the high lift type becomes harder. Please re-adjust the front and rear suspension as necessary. Depending on the setting, modification may be required on the side stand in some case.

DELTA BARREL 4 SILENCER

- Improved emission efficiency and exhaust pressure. DELTA BARREL 4 silencer provides high power in the entire power band.
- Special inner silencer body and multi-stage expanding mid pipe design provides power at the high end, and rich torque at bottom and middle bands.

Mid pipe is made of stainless steel. Silencer body is light weight aluminum.

Exhaust center of gravity is positioned for motorcycle control performance.

The best silencer for street or trail.

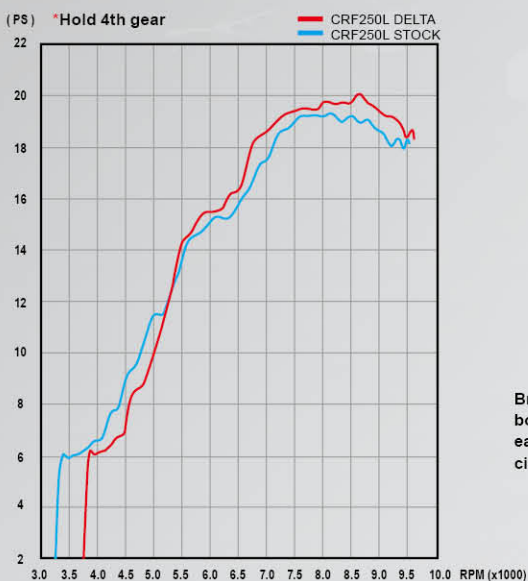

Designed for street, enduro, super motard use.

Sound output : 94 db

FIM approved end-cap design

Use with stock or DELTA head pipe.

Gasket not included. Use stock gasket.

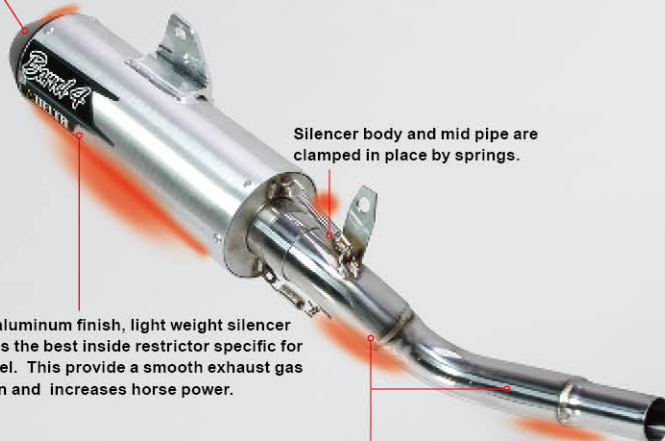

Provides more power and torque than stock pipes
Dyno graph for CRF250L as shown above.

FIM approved aluminum die-cast
end cap.

Brushed aluminum finish, light weight silencer
body. Uses the best inside restrictor specific for
each model. This provide a smooth exhaust gas
circulation and increases horse power.

Silencer body and mid pipe are
clamped in place by springs.

Multi-stage expanding mid pipe
design provides more torque at the
middle and bottom ranges.

DELTA TORQ HEAD PIPE

- DELTA head pipe for more power and torque when using DELTA silencers.
- Developed for characteristics specific to each bike for more performance.
- Provides better power, acceleration and engine traction than stock head pipe.
- Upgrades performance characteristics for each model.
- Made of SUS304 stainless.

[Design]

Rounded edge design for less stress concentration and rigidity.

[Rigidity Balance]

Top bridge body is flexible when the bike is deeply banked for smooth front fork movement.

[Factory Look]

Recent light weight design used on Moto GP and WSBK race bikes.

[Light weight design]

Super light weight design, but still provides great rigidity balance. RSV4 stock top bridge weight = 534 g, ZETA top bridge = 494 g. ZETA is 40 g lighter than stock RSV4 top bridge.

[Ti-6AL-4V bolt]

Clamp bolt is made of titanium for light weight and stable tightening torque.

FLIGHT LEVER

- Used by YOSHIMURA Racing team, US YOSHIMURA SUZUKI FACTORY RACING TEAM, Kawasaki Racing Team and UK Buildbase Suzuki.
- Holes on lever body is designed to decrease wind pressure up to over 300 km / h.
- The breaking point is pre-calculated in case of a fall.
- Fully CNC machined from A7009 / A6061 aluminum, super light weight design.
- Conforms to FIM and MFJ regulations.
- Available 3 finger and 4 finger lever arm lengths.
- Available in black and titanium anodized colors.

FUNCTION

Vent Holes

Lever body is designed to decrease wind pressure, and in case of a fall, the breaking point is pre-calculated to avoid worst case "DNF".

Folding lever

Lever swings upward in the event of crash and prevents lever breakage.

Lever end ball

19 mm lever end ball complies to MFJ and FIM regulations.

ZETA

FLIGHT LEVER REMOTE ADJUSTER

- Provides fine adjustment to the brake lever from the left side handlebar.
- Able to tighten slack in your brakes with your free hand without letting off the throttle.
- CNC machined handlebar support included.

PLASTIC LEVER GUARD

- Lever guard redesigned for race.
- Resin lever guard has high strength and excellent flexibility.
- Steel bar ends and inner brackets provide the effect of balancer weights and contribute to vibration countermeasures.
- Installation workability has also improved.
- It is a truly race part which does not have the adjustment mechanism with the setting of only the right side.

CHAIN ADJUSTER BOLT

- By using titanium bolts the unsprung weight is reduced, and compared to stock bolts, strength is increased and visual appeal is enhanced.
- Nut is designed one size smaller, for reduced weight and compactness. And because titanium bolts to form a non-conductive coating on the surface, it will not rust.
- M8 is used by the four main Japanese manufacturers of off-road, and also some on-road manufacturers (Axle block bolt adjustment type vehicle).
- M10 is mainly used on KTM off-road models, and Husqvarna.

WASHER

- Made of CNC machined Ti-6AL-4V
- Excellent accuracy, unlike common press machine punched washers.
- Reduce weight by replacing with titanium washers, as well as increasing strength, improved visual appeal.
- Lineup for the high frequency of use M6, M8 and M10.

AXLE SHAFT

**SIGNIFICANT LIGHT WEIGHT
TITANIUM AXLE SHAFT**
LIGHT WEIGHT

The specific gravity of Ti-6AL-4V is about 4.4. This is about 56 % with respect to the specific gravity of 7.8 of stock axle shaft using iron (SS400) and carbon steel (S45C), or chromium molybdenum steel shaft (SCM440). This means that if you manufacture the axle shaft with the same mass, 64 titanium will be able to produce about 44 % reduction in weight. The reduced weight of the axle shaft also reduces the unsprung weight and corner approaches will improve the handling and stability. In addition, the reduction of unsprung weight will not only improve the movement of the suspension, but also improve brake performance.

Not only Light. Not only strong. Not only flexible. If it is made of aluminum or magnesium it will be lighter than 64 titanium but it will lack strength. If it is made of chromium-molybdenum steel and nickel-chromium steel it will be stronger than 64 titanium, but it will be heavy. There is also materials having Young's modulus lower than 64 titanium, but it will not mean that there is "BENDING". 64 titanium is superior to a balance of these materials. Therefore it may be said that it is the best material for the axle shaft.

Also we must not forget the appearance of titanium. It more difficult to rust than stock shaft and chromium-molybdenum steel shaft that has a protective surface treatment. However, it does not escape corrosion where the surface is compromised for some reason. Ti-6AL-4V forms a passive film surface to prevent semi-permanent rust to form.

ULTRA STRENGTH

Strength of Ti-6AL-4V is comparable to chromium molybdenum steel (SCM435) 900 - 930 Mpa. With the higher strength axle shaft, you will be able to feel more road surface information more directly. You will be able to sense the bumpy road that could not be felt until now.

BENDING

The Young's modulus of Ti-6AL-4V is about half of iron and chromium molybdenum steel at 106 Gpa. The Young's modulus represents the rigidity and elasticity, the higher the number, the higher the rigidity. Generally, one thinks "high-strength = high rigidity," also 64 titanium has been taken for granted as high rigidity, but actually it is only half the rigidity of iron. Therefore it is easily deformed, but there is elastic deformation where a material tries to return to its original state, and plastic deformation where deformation is permanent. 64 titanium has a wide range of elastic deformation. In other words this is "BENDING". It is this bending that produces the suspension effect, and high strength that softly transmits road surface information.
