Cross-country race specification

"SEROW 250 Cross-Country" with full-scale enduro

A cross-country race specification customized based on the concept of the SEROW 250 used by Kenji Suzuki, DIRTFREAK promotion rider, for the 2016 All Japan Enduro Championship Hidaka 2 Days. We have a rich lineup of special parts such as wheels, suspensions, guards, brake parts, and mufflers, which are important points when customizing an enduro bike.

SEROW250 of "Off-road small rider's specifications" produced by DIRTFREAK

We made a custom SEROW to make it easier for small riders to ride.
Not to mention the looks, the parts that off-road small riders think "Attentive to the needs" are customized.
The lowdown and handle position are compactly set so that it can be adapted to a small rider.
Operability is also improved by installing levers and grips that make it easier to control even with small hands.
We are particular about weight reduction such as themuffler and tail holder, and reduce the risk of falling by making the handling of the bike lighter.
Equipped with safe protective parts that firmly protect the parts if they are damaged even if they fall over at the touring destination.

The one-piece upper bar clamp helps stabilize handlebar and prevents bar twist when falling down.

One piece stabilizer is set by 4 special bolts. To securely mount handlebar, the clamp is designed to be tightened first with the 2 front side bolts, then the 2 rear side bolts.

Reinforcing ribs are positioned for maximized strength and minimized weight.

Specially designed lower bar clamp provides the option of 8 different back and forth positions in 5 mm increments. (Maximum)

The two holes allow 2 back and forth positions of the handlebar clamp on the top clamp.
Utilizing the optional lower clamp enables different handlebar height positions.

Front fork clamp area designed to securely clamp the front fork. Specially designed Front fork bolts are made of stainless to prevent corrosion.

ZETA

TRIPLE CLAMP KIT 3 mm OFFSET CLAMP

- 3 mm front fork offset clamp increases trail amount, provides quicker and more stable handling for super moto riding.

Part #	Bike	Year	Color
ZE14-4253	WR250X (3 mm offset)	07-17	Black

In the case of the WR250X, the outer diameter of the tire is reduced from 21 inches to 17 inches of the WR250R, so the casters stand and the trail amount is significantly reduced compared to the WR250R. This makes it easier for the steering wheel to be cut or to be affected by swinging the steering wheel at corners.

By bringing the front fork closer to the steering shaft (offset 3 mm), the trail amount is reduced to 17 inches and the stability is improved.
The effect is seen from the middle of the corner to the rise of the corner, enabling stable cornering.
In addition, the high-rigidity clamp improves stability and drift controllability in high-speed corners.

FUNCTION

PLASTIC SLEEVE

The plastic sleeve built into the handle clamp rotates when it falls to release the impact and reduce damage to the lever.

THICK DESIGN

Increase the strength of the pivot part, which is easily damaged by the lever, to prepare for the impact of a fall.

LEVER ARM

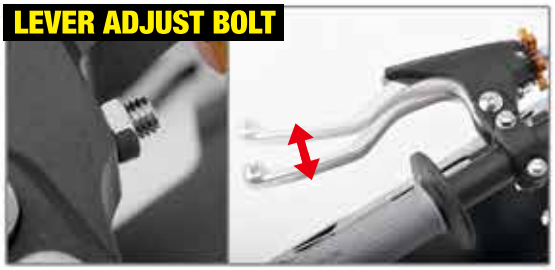

Forged aluminum has strength and durability with keeping a fine shape design to pursue ease of pulling.

WIRE ADJUSTER

A wire adjuster that can be adjusted by hand without using tools.

LEVER ADJUST BOLT

The reach of the lever arm can be adjusted according to the size of the hand.

MIRROR HOLE

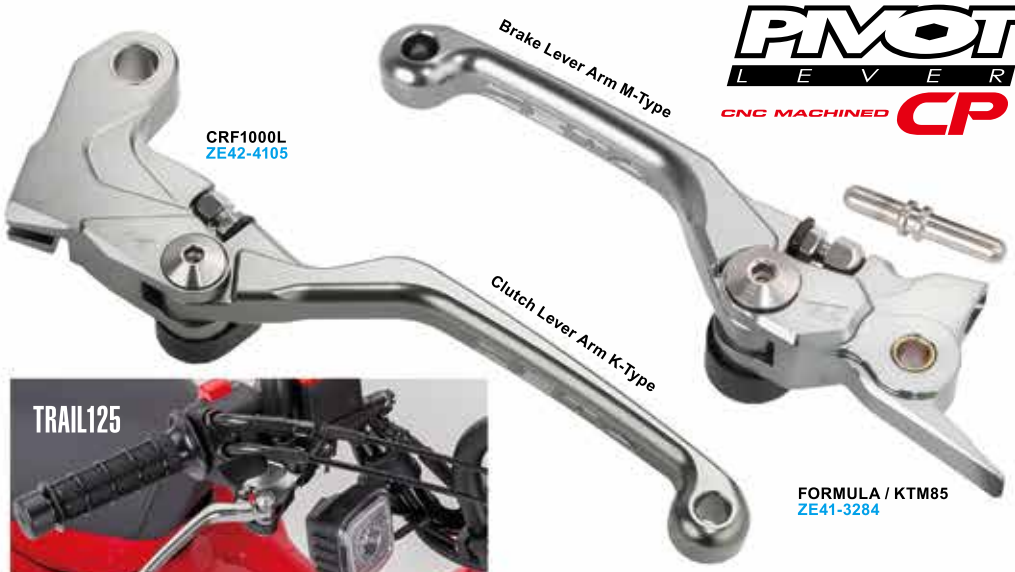

Mirror hole type set for public road (ZE43-5011)

ZETA
ANTLER HAND GUARD

- Made from high quality, durable and lightweight polyamide material.
- Multi-position mount allows guard to mount without interfering with natural handlebar flex, helping to reduce arm fatigue.
- Designed to be used with our entire line of Armor Hand Guards.
- All kinds of armor guard series protector can be installed.
- Can be use 22.2 mm and 28.6 mm handlebar.
- **Inner diameter of 13.5 mm to 16 mm**

Part #
ZE73-1001

* When installing on trail models, ensure there is adequate space between the switches.
* This 100% polyamide guard contains no metals.
* Cannot be mounted using the X3 mount stay

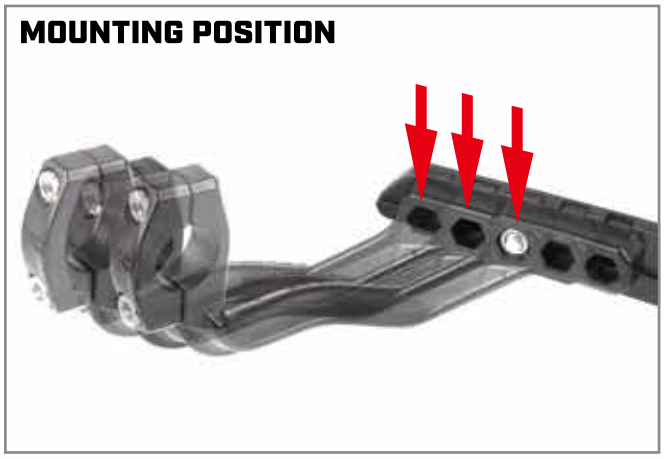

KEEP HANDLEBAR FLEX

Made of TPU with excellent impact resistance. Balance between rigidity and flexibility. Delivers stable performance even at low temperatures. By curving the shape of the grip end part, it does not interfere with the “door knob grip” when tilting or holding down.

MOUNTING POSITION

“Made of TPU mount stay has a shape that avoids brake hoses and wires. The tip position can be selected from three mounting positions. Both standard diameter bar (22.2 mm) and large diameter bar (28.6 mm) are supported. W adaptive diameter: 22.2mm-23.5mm”

ALUMINUM BAR END PLUG

The high-strength aluminum bar end and 3mm-thick spacer protects the guard body from falls and other shocks are lightweight and strong. Compatible with aluminum handlebars with an inner diameter of 13.5 mm to 16 mm.

PROTECTOR

An optional armor hand guard protector can be attached.
(Scudo protector cannot be installed)

CHAIN GUIDE

- Chain guide composed of TPU, excellent in wear resistance and restorability and duralumin plate with CNC processing.
- Reduce the load on the swing arm attachment stay by using TPU material that is durable against impact and wear.
- 3D design slider reduces the impact of the debris coming from all directions.
- Maintains its guiding performance that requires rigidity by a duralumin plate designed exclusively for the model.

* Please apply removable low to medium strength screw lock for installation.
* Please check the slider wear periodically.
* In the case of trail models, guiding performance is enhanced as much as racers.

Angles in the front avoid the impact, and the sleek 3D design reduces the catching and damage risk.

Its Elastic structure avoids interference trouble with sprocket, compared to one made of aluminum when catching the debris.

The insert nut is used on the back. Eliminating the protruding bolts and nuts, smooth head shape reduces catch during tire change.

The slider bottom has a reduced contact area in consideration to the ground clearance.

ENGINE PROTECTION UNDERFRAME KIT CROSS CUB

"UNDERFRAME KIT with skid plate.
Protects the engine from stepping stones during off-road driving.
The frame is made of steel, and black powder coat.
The skid plate is made of aluminum (A5052) with hairline processing.
Stock muffler and DELTA barrel-4s mini muffler can be used together.
(Installation of other brand's muffler is unconfirmed.)
[Please note] It cannot be used for hard use.
Actions such as hitting a large stone or placing it on a racing stand will damage not only the frame but also the engine. "

STOCK STAND

FOGED ALUMINIUM KICK STAND

ZETA

FORGED ALUMINUM KICK STAND

- Lines up with 25 mm shorter than the stock.
  (Some models have high lift standards.)
- Avoids an unstable bike even during changing of the bike height.
  Can also be used safely on rough roads by selecting the OPTION TIP.
- A2014 aluminum is used, maintains strength and durability.

* The inclination varies depending on the model. If the length of the TIP does not work well, see the OPTION TIP conversion table below and change the TIP.

FRONT FORK BOTTOM ADJUSTER

- It allows the adjuster to adjust on the bottom of the front fork without using a tool.
- Just pinch and turn. It relieves the stress job “turning and adjusting with a flat tip screwdriver”.
- Click feeling allows easy adjustment of front fork suspension bottom adjuster.
- Easy to install, just replace OEM bottom adjuster bolt to our kit.
- CNC machined from high grade aluminum for extreme durability.
- Black anodized body and red anodized adjuster knob.

OFF–ROAD SUSPENSION KIT CROSS CUB 110 JP

The front is a high lift specification that increases the stroke amount and overall length by +30 mm by changing to a long type cylinder. A special front spring is set, and the spring rate is changed to 20% higher than the stock one according to the extended stroke amount. Along with this, the effectiveness of the damper is also adjusted to enable smooth movement with a long stroke, improve road followability on dirt roads, and suppress bottom thrust.

- High lift specification that extends the total length by +30 mm by replacing it with a strong rear shock bracket.
- Needle bearing is already installed in the shock mounting part at the bottom of the bracket.
- Since it rotates without resistance compared to the standard rubber bush, it absorbs impact more smoothly without giving unnecessary resistance to the compression and rebound operation of the damper.

ZETA REAR SUSPENSION

LOWERING OUTER KIT

- Lower your rear suspension without disassembling the rear shock unit.
- Push down seal head from out side of damper, and install this kit to lower your suspension 30 mm while keeping its function.
- Make the rear suspension's fully extended length shorter, but not change length when the shock is shortened. Keep clearance between wheel and under fender even upon lowering.
- Can be used with lowering link.
- Available in 46 mm size for KYB / WP and 50 mm size for KYB / SHOWA / WP rear suspension.

WP REAR SUSPENSION GAS VALVE

- WP made rear shock sub tank gas sealed valve conversion adapter (Schrader type).
- Allows Nitrogen gas fitting through a iniversal schrader valve without WP special tools.
- By adding the prevent-falling design, the reliability is improved.
- Lineup of two types: Dent and Flat.

ED PROGRESSIVE SPRING

- A spring with progressive characteristics for enduro.
- The standard spring has a characteristic that the load linearly stiffens in proportion to the amount the suspension sinks, whereas the progressive spring has a characteristic that it is soft when it starts to sink and strong when it sinks deeply.
- With a small gap, the suspension moves well and absorbs well, so there is less strain on the body and the center of gravity when driving is lower, allowing stable cornering.
- It is difficult to hit the bottom when a large impact such as when passing a large gap or landing a jump.
- In addition, since the beginning of compressing is soft, foot contact is also improved.

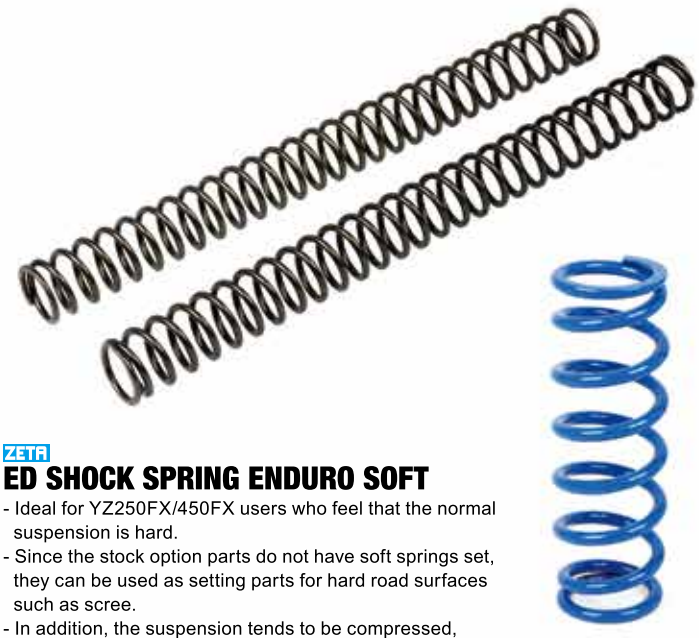

Model: Height 173 cm, Weight 58 kg

Front: ZETA Lowdown inner kit (-30mm) + ED soft spring built-in Fork protrusion amount set to maximum.
Rear: ZETA Lowdown inner kit (-30mm) + ZETA lowering link (-28mm) + ED soft spring already installed

ED SHOCK SPRING ENDURO SOFT

- Ideal for YZ250FX/450FX users who feel that the normal suspension is hard.
- Since the stock option parts do not have soft springs set, they can be used as setting parts for hard road surfaces such as scree.
- In addition, the suspension tends to be compressed, so it provides a low-down effect.

Best spring for grown-up to ride

DRC FRONT FORK / REAR SHOCK SPRING
85/150cc adult specification

- Originally designed a spring that gives the most suitable suspension effect when going off-road on a mini motocross.
- The optimum spring rate is set for each model with a weight of 65 kg as a guide.
- Achieves stress-free and comfortable sports riding by improving stability and reducing the feeling of bottoming out on motocross courses.

ROTOR / SPROCKET COVER

- Best cover for transporting and storing a spare wheel with high cushioning neoprene material for protecting the entire surface.
- It prevents oil from adhering to the disc rotor and does not stain the transporter with sprocket oil.
- Comes with a tag to identify disc rotor and sprocket.

AR1 WHEEL KIT

[Astelight HUB]
By precision CNC machining, high-strength cylindrical aluminum to 1/10th in weight, the design emphasizes strength, light weight and a beautiful appearance.

[R50Rim]
R50 rim is racing specification for MX / ED race use. The rim uses A7050 T6 Aluminum to pursue a cross-sectional surface designed to balance contradictory conditions of strength versus weight.

[Aluminum Nipple & Stainless Spoke]
High strength aluminum nipples that provides weight reduction compared to stock steel nipples.
High strength stainless steel spoke set which provides a balance of strength and reduced weight by increasing the wire diameter.

AR1 WHEEL KIT FOR DUAL SPORTS MODELS

- A wheel kit assembled with the same specifications as the AR1 WHEEL for dual sports models.
- By combining Z-Wheel made R50 aluminum rim, ASTELIGHT HUB, and an Aluminum nipple spoke set, compared with stock, a light weight and high strength wheel is acheived.

WR250R/X

AR1 WHEEL KIT WR250R/X

- The front wheel can be easily converted to either WR250R ↔ WR250X by positioning the brake disc in the same position as stock.
- The hub is 550g lighter than stock.
- The bearings and seals are designed in sizes compatible with the stock.

Kit contents: rim / hub / Stainless spoke set / aluminum nipple set.
(These parts are not compatible with stock except bearings and seals.

Z-WHEEL

AR1 WHEEL KIT XR250/MOTARD,XR400R,CRM250R/AR

- The XR series stock wheel has low lateral rigidity because the spokes are assembled differently from the MX racing models.
- The AR1 wheel kit not only increases the lateral rigidity by feeding back the motocrosser hub design, but also compared with the genuine hub, a weight reduction of about 700g is acheived.
- The wire diameter is increased both at the front and rear to increase strength.
- The rear wheel increases the number of spokes from 32 to 36 so that power can be delivered to the ground without any waste.

Kit contents: rim / hub / Stainless spoke set / aluminum nipple set.
(These parts are not compatible with stock except bearings and seals.

DRASTIC WEIGHT REDUCTION

- ASTELIGHT HUB achieves thorough weight reduction through CNC process while keeping necessary and sufficient strength.
- The middle portion is boldly cut inside as shown in image (A), and has CNC process done even in areas not visible. Since a large force is not stressed to the portion of the oil seal in image (B), by reducing the thickness, it contributes to weight reduction.
- The accumulation detailed efforts achieves 2/3 weight compared to other brands.

HUB DESIGN

- The front hub is “concave design” that draws a gentle curved shape on the center body.
- Even with the thin design, the curve absorbs impact from outside.
- By having shaved the inside and smoothed the outside shape, there is no waste in performance.

DISTANCE COLLAR

- The material uses A7075 T6 aluminum to ensure sufficient strength. Ven non-visible portion reduces the weight by the thinning of the distance collar except at the ends.

COMPATIBILITY WITH STOCK BEARING AND OIL SEAL

- To have compatibility with the stock parts, easy maintainance is not the only target. But to use the same size as the manufacturer focuses importantly on balance.

Z-WHEEL

R50 RIM FRONT / REAR JP

- Real racing specification rim for ED and MX Racers.
- Made of A7050-T6 aluminum with special rim design for durability.
- Durable constructions yet light weight.
- Available wide rim lineup, latest competition bikes to older and dual sport models.
- Rims available for dual sport models, upgrade to high specification rims used by latest MX racing models.
- Available in Black, Silver, Burgundy Red, and Green.

Z-WHEEL

STEEL / STAINLESS SPOKE SET

- Spoke set to fit R50 rim. Fit to Z-WHEEL aluminum nipple or stock nipple (excluding some models).
- Lineup made of steel and rust resistant corrosion-resistant stainless steel.

[Note]
When using for the R50 rim, some vehicles need a nipple set for spoke set.

STAINLESS NIPPLE WASHER

- A washer for nipples that prevents spokes from protruding by being installed between the rim and nipple.
- When assembling a wheel with an aftermarket rim and spokes, the spokes may protrude from the nipple depending on the compatibility of the parts, which may damage the tire tube.
- If spokes pritrude about 1mm, using the nipple washer can prevent protrusion.
- Made of rust-resistant stainless steel.
- 40 pieces in a set.

Z-WHEEL

ZIGRAM ROTOR

- Standard sized brake rotor developed for use under extreme conditions with off road riding.
- Thick design for improved strength.
- Made of high carbon stainless steel (SUS420) for better brake feel and corrosion resistance.
- Standard type is a light weight design with holes placed based on strength analysis.
- Mud type has a solid design to keep the mud away from the rotor and prevent frictional wear of brake pads in a muddy race.

STD ROTOR

MUD ROTOR

ZW is 3.5 mm. The stock thickness is 3 mm

Z-WHEEL
BRAKE HOSE

- PTEF inner brake hose covered by stainless mesh provides better stopping power and sensitive control.
- PVC red and blue color brake hose cover protects stainless mesh from rock and mud.
- Chrome plate coated brake banjo. Nut fitting design provides flexible brake hose installation.

MOTO LED flashers may not work properly without optional parts. Please refer to P145 for optional LED flasher parts.

MOTO LED flashers may not work properly without optional parts.

Important note for using LED flasher

LED flashers have very low consumption and the stock flasher relay may not work properly. The most frequent problem, is that the LED may flash at a quick rate using stock flasher relays. Please refer to the chart below to choose our IC relay or Resistor wire for your installation.

	Electric consumption	Difficulty of installation	Parts cost	AC or DC
IC Relay	Low	Skills required	Cheap	DC
Resistor wire kit	Same as stock	Easy	Reasonable	DC/AC

* DRC IC Relay can not be used with motorcycles (XR50/100M, XLR250, WR250F/WR450F, XR650 etc) due to the AC power design. Please use Resister wire kit for AC power motorcycle.

DRC MOTOLED INDICATOR WIRING

This kit is required when flasher operates like hazard indicators after the IC relay installation.

Place these harnesses in-between the wires from the pilot lamp and the wires from the chassis.

* Some models (*3) require this kit for proper operation.

*3 ----- XR230, KSR110, KLX250, D-TRACKER-`07 etc.

Part #
D45-91-051

DRC MOTOLED RESISTOR WIRE

When standard bulb flasher is replaced by LED flasher, electric consumption becomes low and stock flasher relay does not work correctly. This Resistor wire helps stabilize the electric power to the LED flasher from stock flasher relay.

: Electric power consumption level is the same as with stock flasher.
: Easy installation.
: One resistor per flasher.
* Some models (* 2) require 2 resistors.
: This harness will produce heat when used. Please install in areas where heat is not a problem.

* 2 ----- XR230, DR250R, DRZ400S/SM etc.

Part #
D45-90-710

DRC MOTOLED IC RELAY for DC

Stock flasher relay is designed to work with standard bulb flashers.
When the stock flasher is changed to LED flashers, the stock flasher relay does not work properly due to the difference in power consumption between the stock flasher bulb and the LED flasher. This IC Relay enables LED flashers to work in any configuration.

* Some models require the use of the stock IC relay along with this IC relay. (*1)

: Reduced electrical power usage.
: Some technical skills required for installation.
: One IC relay required for each bike.
: Flasher pilot light can not be used with position light when installed on XR250.
: If the flasher operates like hazard indicators after installation, Indicator lamp wiring kit is required.
: Works on 12V DC.

Can not be used with WR250F/450F

*1----- RMX250S, DRZ400S/SM etc.

WIDE FOOTPEG

- Durable steel wide foot pegs.
- Made of chromium molybdenum steel for extreme durability.
- 50 mm step width provides better grip and control.
- Mid, High (5 mm higher than medium peg position) and Low (5 mm lower than medium peg position) are available for rider's body type or use. (Excluding some models.)
- Black powder coating finish.

* Foot peg height may differ from stock peg height on some models.

High gravity point allows for easy lean on the bike. Good for shorter riders.

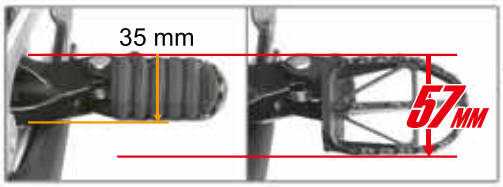

Low gravity point provides better traction during standing ride. Good for taller riders.

REAR SUSPENSION LINK KIT LOWDOWN / LIFT UP

- Kit to lift up or lowdown the bike.
- Allows to optimal bike position for a rider by changing seat height, link ratio, caster angle.
- The lowdown type : The amount of descent is designed to maximize the performance without losing the off road function.
- The high lift type : Allows improved nimble steering and better traction as the wheelbase be comes shorter with a steep caster.
- Easy installation with two bolts.
- Black color.

[Important note]
As the link ratio changes, the lowdown type makes the suspension softer, and the high lift type becomes harder. Please re-adjust the front and rear suspension as necessary. Depending on the setting, modification may be required on the side stand in some case.

MATERIAL

■ COOLMAX
Coolmax is a high-performance material with the threat of quick-drying performance that is 6 times that of cotton. There are four grooves in one fiber, and the capillary action allows sweat to diffuse quickly. The diffused sweat evaporates while taking away the temperature of the body surface due to the heat of vaporization, resulting in a high cooling effect.

■ THERMOLITE
Thermolite is a high-performance material that has macaroni-shaped fibers and has excellent heat retention and quick-drying properties. Warm air can be retained in the hollow part of the fiber, so the warmth is maintained. In addition, it has a quick-drying performance that is 1.5 times faster than cotton, preventing sweat chills during exercise. Even in sports with intervals, the inside is always warm and dry.

■ Reissa membrane
A membrane that combines waterproofness, moisture permeability, and durability. While keeping the inside dry while blocking wind, rain and snow, it provides a comfortable environment.
Waterproofness: 10,000mmH2O (ISO811(E):1981)
Breathability: 10,000g/m^2/24h (ASTM E 96:2010)

■ Hipora
A membrane for gloves that combines waterproofness, moisture permeability, and durability.

■ 3M Thinsulate
High-performance batting material. The fine fiber structure provides excellent heat insulation.

■ 3M reflector
A world standard retroreflective material for both quality and durability.

1680D BALLISTIC POLYESTER

■ 1680D ballistic polyester
Polyester fabric with excellent abrasion resistance. It has both durability and flexibility.

■ SAS-TEC pad
Foam that slowly follows slow movements and instantly cures (hardness change) in case of fast impact. Since it is soft and light, it is ideal for motor sports where easy movement is important.

COOL MAX®

COOLMAX

Coolmax is a high-performance material with the threat of quick-drying performance that is 6 times that of cotton. There are four grooves in one fiber, and the capillary action allows sweat to diffuse quickly. The diffused sweat evaporates while taking away the temperature of the body surface due to the heat of vaporization, resulting in a high cooling effect.

THERMOLITE®

THERMOLITE

Thermolite is a high-performance material that has macaroni-shaped fibers and has excellent heat retention and quick-drying properties. Warm air can be retained in the hollow part of the fiber, so the warmth is maintained. In addition, it has a quick-drying performance that is 1.5 times faster than cotton, preventing sweat chills during exercise. Even in sports with intervals, the inside is always warm and dry.

TITAN
BOLT&NUT SERIES

- High quality light weight titanium bolts, nuts, washers and pivot pins available from ZETA.
- Brake disc bolt kit and sprocket kit available for specific models.
- Made of hot forged Ti-6AL-4V for a durable and extremely light weight product.
- High presision CNC machined bolt and nut head, head size is one size smaller than industrial standard for reduced weight.

Hot forging, CNC machining, thread rolling

ZETA titanium product is designed to be light weight with no decoration. Titanium products are not only machined but also hot forged to provide more tensile strength than material strength.
Bolt and nut are designed with a smaller CNC machined head for a lighter design.

Ti-6AL-4V

ZETA titanium products are made of Ti-6AL-4V.
This chemical notation means this titanium includes 6% aluminum (AL) and 4% vanadium (V). This material is light weight and durable.
It is used in aircraft and space industries, nuclear industry, industrial turbine, race car and motorcycle etc.

Titanium type and strength difference between other material.

Pure Titanium	Lower price than other titanium alloy, great corrosion resistance, but less strength.
Alfa alloy	Great creep resistance and welding work, but bad workability.
Beta alloy	Most durable titanium alloy, easy workability, but high production cost.
Alfa beta alloy	Great durability, ductility, toughness and workability. Zeta Titanium product is made of this material, Ti-6AL-4V.

CHAIN ADJUSTER BOLT

- By using titanium bolts the unsprung weight is reduced, and compared to stock bolts, strength is increased and visual appeal is enhanced.
- Nut is designed one size smaller, for reduced weight and compactness. And because titanium bolts form a non-conductive coating on the surface, it will not rust.
- M8 is used by the four main Japanese manufacturers of off-road, and also some on-road manufacturers (Axle block bolt adjustment type vehicle).
- M10 is mainly used on KTM off-road models, and Husqvarna.
